

# FOG: Invisible Danger, Safe Driving Guide

Fog reduces visibility below 1 km, impairs perception, and increases pile-up risk.

This guide outlines dangers and safe driving techniques.

**Visibility and Perception Impaired**  
(Speed and distance estimation difficult, dangers detected too late).

**High Beams Create a "Light Wall"**  
(High beams reflect off fog droplets, worsening visibility).

**Increased Pile-up Risk**

Yetersiz takip mesafesi, ani bir duruşu felakete dönüştürebilir.

## Solution: Life-Saving Rules in Foggy Weather

### DO: Safe Steps

**Reduce Speed, Increase Following Distance**  
(Drive at a speed where you can stop safely)

**Use Low Beams and Fog Lights**  
(See and be seen; this is the most important rule)

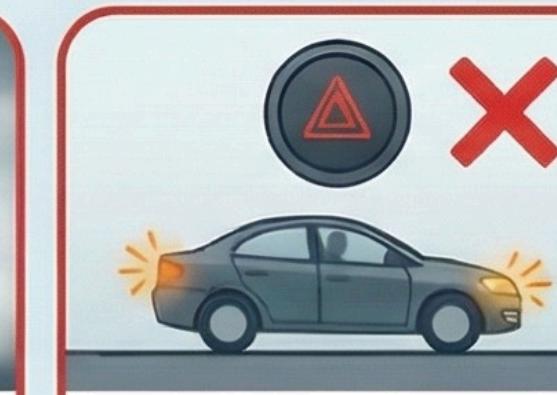

**Use Road Lines as Reference**  
(Follow fixed lines, not the car ahead)

### DON'T: Dangerous Habits

**Never Use High Beams**  
(Reflected light completely obstructs view)

**Do Not Use Hazard Lights While Moving**  
(Hazards are only for sudden stops or danger)

**Avoid Sudden Braking and Overtaking**  
(Fog distorts distance perception, making these maneuvers very dangerous)
