

# ROAD SAFETY

## STORMY-WINDY WEATHER

MY SAFE ROAD COMPANION

### Reduce Your Speed

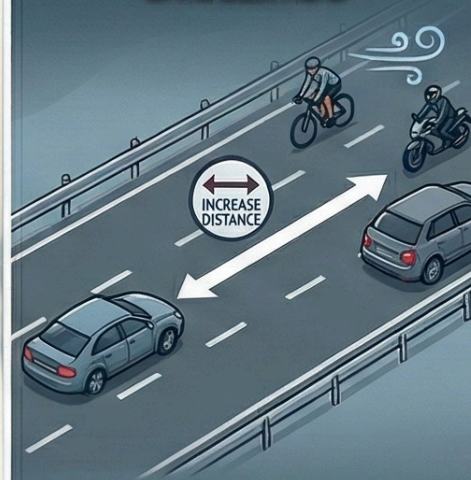

The wind's effect on the vehicle increases proportionally to the square of the speed. Reducing your speed decreases the wind's power to sway you.

### Hold the Steering Wheel with Both Hands

A firm grip at the 9-and-3 position is essential to react to sudden wind gusts.

### Increase Following Distance

Especially the vehicle in front may sway due to wind or its load may fall off. *düsebilir.* Leave extra space for cyclists and motorcyclists, strong wind gusts can blow them off the road.

### Avoid Overtaking

Especially when overtaking high-sided vehicles, entering and exiting the "wind shadow" causes sudden vehicle buffeting.

### Load Security

Ensure loads on roof racks or in open-bed vehicles are securely fastened.
