ROADSAFETYCULTURES

You're right, sweetie; I should rest for a bit. Your mother can take over the driving. If not, we can stay here for the night. Nothing is more important than our safety

ROADSAFETYCULTURES

If your father's eyes look very tired and sleepy, just like the father in the picture, it means he is struggling to drive safely.

If his face looks weary and he seems distracted, just like in the image, he may not be able to focus fully on the traffic.

When your father is tired, he might notice hazards too late and have trouble controlling the car, which increases the risk of an accident.

If you notice your father is this tired, for your safety, you should remind him to take a break and rest immediately.
